

AIRCON INDUSTRIES

Tank manufacturing | Ahmedabad, India

Tanks built around your requirements.

Aircon Industries manufactures compressor tanks, air receivers and custom tanks for gas, liquid, oil, water and chemical applications. We welcome RFQs from OEMs, distributors and industrial procurement teams in the United States, Canada and Europe.

Actual photograph from the Aircon manufacturing gallery. Configuration shown is an example.

Start with the application.

Share the stored medium, capacity with units, operating conditions, drawing and installation location. Tank dimensions, material compatibility, testing, documentation and delivery scope are agreed for the specific project.

Direct manufacturer contact

Email: support@airconindustries.com

Phone: +91 98980 86481

15/25 Comet Estate, Ahmedabad, Gujarat 380021, India

Time zone: IST (UTC+5:30)

A starting point for your RFQ.

Capacity is configured for the application. Include the capacity unit and the medium. If you specify capacity as a mass in kilograms or pounds, include density or the corresponding required volume so the requirement can be reviewed.

Air receivers and compressor tanks

Compressed-air installations and equipment assemblies. Include working pressure, mounting layout, connections and any existing equipment drawing.

Dental compressor receiver tanks

Tank-component inquiries for dental compressor equipment. Include equipment specifications, coating and air-quality requirements for technical review.

Gas tank applications

Specify the gas, composition, pressure, temperature and connection requirements. The design and suitability are reviewed for the intended service.

Water, oil and liquid storage

Identify the stored medium, required volume, installation space, fittings and operating conditions. State potable-water or other application requirements where relevant.

Chemical tank applications

Identify the chemical, concentration and temperature. Include material compatibility, corrosion allowance, lining, seals and venting requirements in the project specification.

Project-specific scope

Ask for written confirmation of the agreed specification, current credentials, testing, documentation and availability. Product categories and photographs do not establish destination-market approvals.

Send a brief your team can evaluate.

01 Application and capacity

Stored medium; volume in litres, US gallons or Imperial gallons; or mass with the medium and density.

02 Operating conditions

Working/design conditions required by your specification; pressure and temperature with units.

03 Drawing and interfaces

Drawing revision, dimensions, orientation, mounting and connection layout.

04 Materials and documents

Required material, finish, design code, registration, inspection, testing and conformity documentation.

05 Order and destination

Quantity, expected repeat demand, installation country/state/province, delivery city or port and target schedule.

06 Commercial scope

Ask for quote currency, packing, freight, payment terms, delivery terms and responsibility for import clearance.
